ITALIAN MILITARY REPORT POSITIVE SKYWATER® 300 TESTS IN SENEGAL

Hollywood, FL - Island Sky Corporation (ASX Code: ISK), the manufacturer and distributor of innovative atmospheric water generators, announced today that it has received favorable reports by the Italian Military for its participation in the Senegal based military field trial using Skywater® 300 machines. Island Sky's Italian distributor Veragon SRL supervised the twenty-day trail and is promoting the technology in Africa.

The Skywater machine was used during the course of the EMERALD MOVE 2010 mission, held in Senegal from the 8th to the 28th of November, 2010.

According to the technical report of the Battaglione Logistico Golametto, "The use of Skywater has tested very positively, resulting in economic savings and a reduction of the logistical costs of loading/unloading and distributing bottled water."

The official report disclosed additional reductions of the costs connected to disposing of plastic containers and packing materials such as plastic bottles, wood pallets and cellophane wrapping materials. The footprint of the machine is the size of 2 pallets of bottled water (equivalent to about 1,500 liters of water in 1/2 liter bottles) consequently saving cubic meters of cargo space. The machine is fitted with a mineral filter and an antibacterial system that kills bacteria with an ultraviolet light. The military command deemed the water analysis appropriate for human consumption.

According to the technical director of field operations, the average production of potable water by the machine was 400 liters per day, with a power consumption average of 11Kw for an average cost of €0.08 cents per liter, compared to the market cost of €0.26 cents a liter bottled, a savings of about 2.5 liters per capita.

"There was therefore a savings of 16,330 liters of bottled water, for a value of EUR€ 4,245.80 over the 20 day testing period. Ultimately, we can advise that the machine in question is an excellent investment in terms of the savings of economic resources while having very positive results for the entire staff, both Italian and foreign, who worked on the EMERALD MOVE 2010 mission," the report concluded.

Island Sky® has developed Skywater® a unique patented “air to water” making machine which draws water vapor from the air and converts it into drinkable water.

The Skywater-14, for home and office use, can, under optimal conditions, be expected to produce up to 50 liters of water per day at low energy costs. The larger Skywater-300 is capable of producing up to 1100 liters of water per day.
